CHOOSE THE BEST SHOWER PANEL FOR YOUR DREAM BATHROOM

A shower panel consists of all the must-have features and settings one needs for a shower. Aside from providing all the essential features in a single panel, **shower panels** also give a sleek and modern look to the bathroom. There's no need to install separate parts such as shower heads and faucets, as a shower panel already involves all these parts. Since shower panels consist of different parts in a single panel, it is much more budget-friendly than purchasing separating parts.

What Is Included In A Shower Panel?

- Overhead Shower
- Handle head Shower
- Temperature control faucets
- Body Sprayers
- Setting control faucets

How To Choose The Right Shower Panel

- Choose your must-have features
- Select a faucet control type
- Consider a flow rate
- Decide the number of body sprays
- Choose your spray pattern

About Us:
